2:25pm

How to do UX research without enough time, resources or know how

🕒 2:25pm - 3:10pm, Oct 14

Elentra Consortium **Technical Professionals**

Walking through some simple but effective UX research methods that can be performed by anyone when they want to know more about how users use and feel about the systems they use. Attendees will be given materials they can use to conduct simple UX research within their own institutions to provide better insight during all phases of Elentra development.

3:15pm

Power BI: Visualizing Academic Progress

🕒 3:15pm - 4:00pm, Oct 14

Elentra Cloud **Elentra Consortium** **Faculty and Leadership** **Technical Professionals**

In this session, Western Michigan University Homer Stryker M.D. School of Medicine will demonstrate their student dashboard platform and discuss a high-level overview of the ongoing development and implementation of the system.

At WMed, learner data and information is collected and generated in multiple systems, with a variety of means of displaying information to students and stakeholders. To identify key indicators of performance, this information must be consolidated into a single location with a cohesive presentation. The dashboard solution provides students and faculty advisors a student-focused view of the data across those systems. The system is organized as a hierarchical series of views, guiding students and faculty through increasingly detailed information. The Microsoft Power BI platform framework is used to pull the data from multiple sources into a cohesive and complete display of student performance.

While the dashboard is still a work in progress, we are eager to show its benefits and promise to the larger Elentra community. The presentation will include a brief history of the project, demonstrate the current dashboard, provide an overview of the challenges, present a high-level overview of the platform architecture and discuss future plans.

Being a Good Code Citizen

🕒 3:15pm - 4:00pm, Oct 14

Elentra Consortium **Technical Professionals**

This session targets developers of all experience levels. In this session, we will go over foundational coding practices, and establish some Do's and Don't when writing code for Elentra, serving the purpose of writing clean, maintainable and scalable code.

This session is intended to display some of the main opportunities for improving our codebase, how it ties into our code review process.
